

QuantumColleagues.

1 OF 3

People decide. **Agent colleagues** do the work.

We designed our agent threshold model to ensure that anything with real world consequences stops with a named person.

Do some good with AI.

HOW THE THRESHOLD MODEL WORKS

Every agent colleague works inside a written role.

- The role says what the colleague may do on its own, what it prepares for a person, and what it must never touch.
- Routine work runs without asking. The post is read and sorted, the drafts are prepared, and the record is kept.
- Anything with real world consequences stops with a named person, and their decision is logged against them.
- The trail shows who decided what and when. We designed it to support what your sector's regulator expects.

PEOPLE DECIDE

Ask one question before any other: who decides?

Agent colleagues do the work and people decide. We built it that way from day one, because our clients answer to regulators and we take that seriously.

SMEs and regulated businesses buy our AI products and advisory services to take advantage of new technology. The profits then fund free post-AI training and career planning.
